RI TRANSPARENCY REPORT

2020

New Forests Pty Limited
About this report

The PRI Reporting Framework is a key step in the journey towards building a common language and industry standard for reporting responsible investment (RI) activities. This RI Transparency Report is one of the key outputs of this Framework. Its primary objective is to enable signatory transparency on RI activities and facilitate dialogue between investors and their clients, beneficiaries and other stakeholders. A copy of this report will be publicly disclosed for all reporting signatories on the PRI website, ensuring accountability of the PRI Initiative and its signatories.

This report is an export of the individual Signatory organisation’s response to the PRI during the reporting period specified above. It includes their responses to mandatory indicators, as well as responses to voluntary indicators the signatory has agreed to make public. The information is presented exactly as it was reported. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory to select are presented in this report. Presenting the information exactly as reported is a result of signatory feedback which suggested the PRI not summarise the information.

PRI disclaimer

This document presents information reported directly by signatories. This information has not been audited by the PRI Secretariat or any other party acting on their behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented, and no responsibility or liability can be accepted for any error or omission.

Usage restrictions

Public Transparency Reports are the intellectual property of PRI. Under no circumstances, can this report or any of its contents be sold to third parties.

### O0 01.2 Additional information. [Optional]

New Forests is a forestry investment manager offering leading-edge strategies in forestry, land management, and conservation. Founded in 2005, we offer institutional investors targeted opportunities in the Asia-Pacific region and the United States and have more than AUD 5 billion in assets under management globally. Our assets include sustainable timber plantations, timber processing, rural land, and conservation investments related to climate mitigation, ecosystem restoration, and protection. New Forests focuses on managing clients’ assets for a future in which landscapes will encompass both production and conservation values.

### O0 02

### O0 02.1 Select the location of your organisation’s headquarters.

- **Australia**

### O0 02.2 Indicate the number of countries in which you have offices (including your headquarters).

- ![ ](0) 1
- ![ ](0) 2-5
- ![ ](0) 6-10
- ![ ](0) >10

### O0 02.3 Indicate the approximate number of staff in your organisation in full-time equivalents (FTE).

- **65**

### O0 02.4 Additional information. [Optional]

### O0 03

### O0 03.1 Indicate whether you have subsidiaries within your organisation that are also PRI signatories in their own right.

- ![ ](0) Yes
- ![ ](0) No

### O0 04

### O0 04.1 Indicate the year end date for your reporting year.

- **31/12/2019**

### O0 04.2 Indicate your total AUM at the end of your reporting year.

- **Total AUM**
  - 5,598,762,725 AUD
  - 379,259,968 USD

### O0 04.4 Indicate the assets which are subject to an execution and/or advisory approach. Provide this figure based on the end of your reporting year.

- ![ ](0) Not applicable as we do not have any assets under execution and/or advisory approach

### O0 05

### O0 05.1 Additional information. [Optional]
Provide an approximate percentage breakdown of your AUM at the end of your reporting year using the following asset classes and investment strategies:

**SG 01.3** Indicate if the investment policy covers any of the following
- ☑ Your organisation’s definition of ESG and/or responsible investment and it’s relation to investments
- ☑ Your investment objectives that take ESG factors/real economy influence into account
- ☑ Time horizon of your investment
- ☑ Governance structure of organisational ESG responsibilities
- ☑ ESG incorporation approaches
- ☑ Active ownership approaches
- ☑ Reporting
- ☑ Climate change
- ☑ Understanding and incorporating client / beneficiary sustainability preferences
- ☑ Other RI considerations, specify (1)
- ☑ Other description (1) Community engagement and stakeholder relations
- ☑ Other RI considerations, specify (2)
- ☑ Other description (2) Workplace health and safety

**SG 01.4** Describe your organisation’s investment principles and overall investment strategy, interpretation of fiduciary (or equivalent) duties, and how they consider ESG factors and real economy impact.

New Forests’ corporate narrative encapsulates our investment beliefs and overarching strategy:

“As global demand for resources grows, there is a need to increase productivity while ensuring the conservation of the world’s remaining natural forests. New Forests seeks to create investment strategies that provide lasting solutions to this challenge. Through responsible management of forests and other real assets, we create shared benefit for investors and local communities alike. We believe that meeting the needs of a broad range of stakeholders will provide better returns over the long term. New Forests has international reach, with offices and assets in Australia, New Zealand, Southeast Asia, and the US. This gives us a global perspective combined with local expertise that allows us to understand and manage our assets more effectively. Wherever we operate in the world, our strength lies in our people and their drive to make investments that create the best possible outcomes. By investing with integrity and transparency we aim to generate strong returns while helping tackle some of the world’s great sustainability challenges.”

Through this strategy, New Forests effectively addresses a range of ESG issues across our geographies.

**SG 01.5** Provide a brief description of the key elements, any variations or exceptions to your investment policy that covers your responsible investment approach. (Optional)

New Forests’ RI Policy includes the policies, tools, and external standards and guidelines that the company uses to guide its RI implementation. The RI Policy is a component of New Forests’ Social and Environmental Management System (SEMS), which establishes comprehensive procedures and processes for the identification, monitoring, and management of material E&S issues. The SEMS also describes the organisational governance and responsibilities for implementation. The RI Policy and SEMS apply to all New Forests’ investments and focus on continual improvement.

- ☑ No

**SG 01 CC** Indicate whether your organisation has identified transition and physical climate-related risks and opportunities and factored this into the investment strategies and products, within the organisation’s investment time horizon.
- √ Yes

### New Forests’ business strategy

New Forests’ business strategy anticipates net positive opportunities for the forest sector from the transition to a low-carbon economy, including climate regulation and demand for sustainable materials, as part of a global response to climate change. New Forests stays aware of developing climate science and policy that inform our business. In particular, we note that the IPCC Special Report: Global Warming of 1.5 Degrees indicates significant changes are required in the forest sector to contribute to viable mitigation pathways. This will require a shift from the forest sector being a net emitter to a net source of carbon dioxide removals through sustainable forestry management and reforestation. However, despite that the forest industry, combined with agriculture, currently contributes around 24% of global GHG emissions coming from land use, only around 3% of climate finance goes to forestry and land use.

In seeking to contribute to forest-climate solutions and the growth of a rising sustainable bioeconomy, New Forests is positioned to benefit from positive feedback cycles linked to emerging climate trends and forestry investment:

1. Rising timber demand for traditional and new wood products as low-carbon inputs for the circular and low-carbon economy reinforces positive pricing trends and market diversification for wood fibre.
2. Increasing demand for low-carbon investments and for carbon dioxide removals from forestry provides capital flows for the expansion of the forest sector, including plantation establishment, sustainable intensification, and diversification of processing and manufacturing for low-carbon products.
3. Product innovation and investment in Natural Climate Solutions creates new low-carbon investment opportunities, creating a positive cycle of investment and return comprised both of financial returns and beneficial climate outcomes.
4. Carbon markets and offsets

New Forests also recognises that there are real and rising physical risks of climate change to the world’s forests. These risks include exposure to changing pests and disease, as well as negative effects from changing weather patterns and extreme weather events, including drought, flood, extreme storms (erosion, windthrow), and wildfire. Forest management to mitigate these risks may call for adaptation and changed silvicultural practices, as well as financial measures such as insurance to minimize financial losses. A full description of New Forests’ assessment of physical and transition risks to our business and how they factor into our investment strategies and products is available in New Forests’ Climate Disclosure Report, available on our website. This report was designed to be aligned to the TCFD.

### Describe the identified transition and physical climate-related risks and opportunities and how they have been factored into the investment strategies/products.

New Forests’ business strategy anticipates net positive opportunities for the forest sector from the transition to a low-carbon economy, including climate regulation and demand for sustainable materials, as part of a global response to climate change. New Forests stays aware of developing climate science and policy that inform our business. In particular, we note that the IPCC Special Report: Global Warming of 1.5 Degrees indicates significant changes are required in the forest sector to contribute to viable mitigation pathways. This will require a shift from the forest sector being a net emitter to a net source of carbon dioxide removals through sustainable forestry management and reforestation. However, despite that the forest industry, combined with agriculture, currently contributes around 24% of global GHG emissions coming from land use, only around 3% of climate finance goes to forestry and land use.

In seeking to contribute to forest-climate solutions and the growth of a rising sustainable bioeconomy, New Forests is positioned to benefit from positive feedback cycles linked to emerging climate trends and forestry investment:

1. Rising timber demand for traditional and new wood products as low-carbon inputs for the circular and low-carbon economy reinforces positive pricing trends and market diversification for wood fibre.
2. Increasing demand for low-carbon investments and for carbon dioxide removals from forestry provides capital flows for the expansion of the forest sector, including plantation establishment, sustainable intensification, and diversification of processing and manufacturing for low-carbon products.
3. Product innovation and investment in Natural Climate Solutions creates new low-carbon investment opportunities, creating a positive cycle of investment and return comprised both of financial returns and beneficial climate outcomes.
4. Carbon markets and offsets

New Forests also recognises that there are real and rising physical risks of climate change to the world’s forests. These risks include exposure to changing pests and disease, as well as negative effects from changing weather patterns and extreme weather events, including drought, flood, extreme storms (erosion, windthrow), and wildfire. Forest management to mitigate these risks may call for adaptation and changed silvicultural practices, as well as financial measures such as insurance to minimize financial losses. A full description of New Forests’ assessment of physical and transition risks to our business and how they factor into our investment strategies and products is available in New Forests’ Climate Disclosure Report, available on our website. This report was designed to be aligned to the TCFD.

### Describe the associated timescales linked to these risks and opportunities.

The world’s forests face real and rising physical risks of climate change, as well as specific opportunities arising from climate finance and the need to invest in mitigation, adaptation, and resilience. New Forests assessed the most material short-, medium-, and long-term transition and physical risks as related to our investments in the forest sector. Our assessment of time scale considers issues affecting near-term management of assets and our ability to invest capital, as well as long-term investment cycles in the types of forests we manage (with tree rotations across our portfolio varying from as little as eight years in the tropics to more than 80 years in semi-natural managed forests of the US). Additional information can be found in New Forests’ TCFD Climate Disclosure Report (March 2020).

### Board and management role in oversight and assessing climate-related risks and opportunities

New Forests’ Board and Executive Committee recognise that forestry investment solutions will be critical to addressing the climate crisis. Climate change-related risks and opportunities are reviewed by the Board through the business planning and strategy review process. New Forests’ Executive Committee is responsible for implementation and monitoring of the business plan and strategy development on an ongoing basis.

### Identifying and managing climate-related risks and opportunities

As an investment manager, the principle climate-related risks and opportunities arise in the asset management function for the capital we deploy and the investments we manage for our clients. Climate-related opportunities are considered in strategic asset planning, which typically follows an annual cycle for review, budgeting, and execution. These are principally driven by wood fibre and carbon market opportunities but may also include additional climate-positive activities like increasing biological growth, supply chain efficiency, operating efficiency, and engaging in environmental restoration and conservation projects that promote ecosystem resilience.

### Climate considerations

Climate considerations feature throughout New Forests’ policies and procedures that support asset management. New Forests’ Social and Environmental Management System (SEMS) requires the identification of significant environmental risks and that operational management controls be in place to manage significant risks. Operational controls include applying responsible forest management practices to achieve high-quality, third-party forest management certification for all production forestry investments. Additionally, New Forests’ Sustainable Landscape Investment (SLI) framework is the company’s environmental, social, and governance (ESG) and impact management tool, which includes an integrated view of land use planning, ecosystem services, productivity, shared prosperity, risk management and governance. The SLI framework has climate impact reporting, as well as metrics on factors that can support climate positive asset management.

### Climate change-related risks

Climate change-related risks are integrated into New Forests’ enterprise risk management (ERM) framework, such that significant policy, market, and environmental risks related to climate change are monitored and discussed. The ERM is guided by the risk appetite statement endorsed by New Forests’ Board of Directors and includes regular review of risks at the New Forests corporate level, as informed and supported by fund-level and asset level risk assessment and management. Each risk is assigned a risk rating and tolerance, with stated mitigations and residual risk ratings determined. The ERM includes a workbook-based risk assessment tool that is applied as part of due diligence and investment appraisal, as well as a dedicated component focused on key risk parameters that span transition and physical risks. The assessment results are documented and considered in investment decisions. During asset management, the ERM requires that asset risk registers be developed and regularly maintained as
New Forests’ management of climate-related risks spans from financial risk mitigations such as insurance for tree crops, to ensuring local property management strategies include operational risk mitigation, through to stakeholder engagement in industry and policy forums.

### SG 1.10 CC

Indicate the documents and/or communications the organisation uses to publish TCFD disclosures.

- Public PRI Climate Transparency Report
- Annual financial filings
- Regular client reporting
- Member communications
- Other

Specify

- New Forests published a TCFD-aligned Climate Disclosure Report (as of March 2020). This report is publicly available on our website. Future integration anticipated.
- We currently do not publish TCFD disclosures

Indicate if any of your investment policy components are publicly available. Provide URL and an attachment of the document.

- Your organisation’s definition of ESG and/or responsible investment and it’s relation to investments
Your investment objectives that take ESG factors/real economy influence into account

Governance structure of organisational ESG responsibilities

ESG incorporation approaches

Active ownership approaches

Reporting

More detailed asset class and sector-based guidelines are included within New Forest’s Social and Environmental Management System (SEMS). Screening and exclusions are included within fund policies, where relevant, to support compliance with the investment exclusions of LPAs and Management Agreements. Our SEMS and Sustainable Landscape Investment framework are proprietary systems that enable our proactive management of social and environmental issues associated with our investment activities. As such, we believe they are an important competitive advantage. Clients and other interested stakeholders can request a copy of the SEMS and related documentation.

Indicate if your organisation has a policy on managing potential conflicts of interest in the investment process.

Yes

Describe your policy on managing potential conflicts of interest in the investment process.

New Forests’ Managing Conflicts of Interest (COI) policy supports identification and management of COIs that may arise. Identifying actual, potential, and perceived COIs is the responsibility of all New Forests’ board members, committee members, and employees, and in particular, each individual is responsible for:

- Being aware of and complying with the obligations of the policy.
- Formally disclosing all personal interests, regardless of materiality, in accordance with the policy.
- Assessing whether personal and business interests conflict or have the potential to conflict with their duties.
- Avoiding a COI, where possible.
- Providing a quarterly compliance attestation that they have reported all COIs that they are aware of, and that they have complied with the requirements of the COI Policy.

To ensure COIs are managed, New Forests’ approach is to implement an appropriate response in each instance by either controlling, disclosing, or avoiding actual, perceived, or potential COIs, where appropriate. In addition, New Forests maintains a COI Register that includes all COIs identified.
and the steps taken to manage each COI such that the quality of New Forests' decision-making is not compromised as a result of managing the conflict.

### Progress achieved

During the year we engaged with clients on specific ESG management issues, including ESG reporting, carbon accounting, the use of IFC Performance Standards, wildlife management, and the use of third-party standards. These activities help ensure our management of ESG issues not only meets client expectations but also provides an opportunity for two-way sharing and continual improvement in ESG management.

#### Improved ESG incorporation into investment decision making processes

**Key performance indicator**

Support Investments and Operations teams in continual improvement of ESG management. Collaborate to embed ESG management in corporate services functions that support funds management.

**Progress achieved**

Ongoing. During the year we engaged with clients on specific ESG management issues, including ESG reporting, carbon accounting, the use of IFC Performance Standards, wildlife management, and the use of third-party standards. These activities help ensure our management of ESG issues not only meets client expectations but also provides an opportunity for two-way sharing and continual improvement in ESG management.

#### Other, specify (1)

- Climate Risk and Strategy

**Key performance indicator**

Undertake climate risk and strategy review and seek to align with TCFD Recommendations

**Progress achieved**

- Developed Climate Risk and Strategy Work Plan. Trained staff on climate risk and TCFD. Developed TCFD-aligned disclosure statement.
- Developed plan for TCFD integration in asset management.

#### Financial performance of investments

- Increase portfolio performance by consideration of ESG factors

**Key performance indicator**

Implement ESG and impact metrics from our Sustainable Landscape Investment framework to monitor combined financial and ESG performance.

**Progress achieved**

New Forests continues to use the SLI metrics and in 2019 began integrating them into a new corporate data warehouse, which seeks to align financial, operational, and ESG/impact reporting into a central data repository, supporting management and reporting.

#### ESG characteristics of investments

- Over or underweight companies based on ESG characteristics
- Improve ESG ratings of portfolio
- Setting carbon reduction targets for portfolio
- Other, specify (1)

**Other description (1)**

ESG and impact metrics

**Key performance indicator**

As above, implemented measurable indicators to monitor our performance against the Sustainable Landscape Investment (SLI) framework.

**Progress achieved**

- New Forests continues to use the SLI metrics and in 2019 began integrating them into a new corporate data warehouse, which seeks to align financial, operational, and ESG/impact reporting into a central data repository, supporting management and reporting.

#### Other activities

- Joining and/or participation in RI initiatives

**Key performance indicator**

- Ongoing. During the year we engaged with clients on specific ESG management issues, including ESG reporting, carbon accounting, the use of IFC Performance Standards, wildlife management, and the use of third-party standards. These activities help ensure our management of ESG issues not only meets client expectations but also provides an opportunity for two-way sharing and continual improvement in ESG management.

- Improved ESG incorporation into investment decision making processes

- Other, specify (1)

- Climate Risk and Strategy

- Financial performance of investments

- ESG characteristics of investments

- Other activities
Maintain/increase participation in RI and impact investing networks

Progress achieved

New Forests uses industry memberships and associations as key elements of our external engagement strategies by participating in strong networks that are driving forward best RI practices, advancing sustainable forest management, advocating for effective public policy, and growing the markets for sustainable investment. In 2019, New Forests sought to be active in its participation in Ceres, IGCC, and AIGCC, as well as major sustainable business associations, such as the WBCSD and BCSD Australia. We contributed significantly to development of impact metrics for sustainable forestry via the GIIN.

- Encouraging others to join a RI initiative
- Documentation of best practice case studies

Key performance indicator
Engaged in networks to disseminate case studies

Progress achieved

New Forests provided case studies at conferences via panel and workshop participation. Our investments were also covered as case studies in publications by the GIIN. We also participated in a PRI webinar on sustainable forestry investment climate. Additionally, New Forests developed a case study on its first US Carbon Forestry investment to inform investors seeking to invest in natural climate solutions.

- Using case studies to demonstrate engagement and ESG incorporation to clients

Key performance indicator
Increase ESG engagement activities with our clients and demonstrate compliance with ESG-related investor requirements.

Progress achieved

As described above:

New Forests provided case studies at conferences via panel and workshop participation. Our investments were also covered as case studies in publications by the GIIN. We also participated in a PRI webinar on sustainable forestry investment climate. New Forests developed a case study on its first US Carbon Forestry investment to inform investors seeking to invest in natural climate solutions.

SG 06.2 Additional information.

New Forests sets RI objectives under corporate sustainability initiatives in the annual business planning process and annual objectives for staff responsible for responsible investment activities.

SG 07 Mandatory Core Assessed General

SG 07.1 Indicate the internal and/or external roles used by your organisation, and indicate for each whether they have oversight and/or implementation responsibilities for responsible investment.

Roles

- Board members or trustees
  - Oversight/accountability for responsible investment
  - Implementation of responsible investment
  - No oversight/accountability or implementation responsibility for responsible investment

- Internal Roles (triggers other options)
  - Chief Executive Officer (CEO), Chief Investment Officer (CIO), Chief Operating Officer (COO), Investment Committee
    - Oversight/accountability for responsible investment
    - Implementation of responsible investment
    - No oversight/accountability or implementation responsibility for responsible investment
  - Other Chief-level staff or head of department, specify
    - Managing Director, Investor Services
      - Oversight/accountability for responsible investment
      - Implementation of responsible investment
      - No oversight/accountability or implementation responsibility for responsible investment
  - Portfolio managers
    - Oversight/accountability for responsible investment
    - Implementation of responsible investment
    - No oversight/accountability or implementation responsibility for responsible investment
For the roles for which you have RI oversight/accountability or implementation responsibilities, indicate how you execute these responsibilities.

- **Board of Directors** → Oversight of sustainability programs
  - Approve RI Policy
  - Approve SEMS Management Review
  - Provide strategic direction for sustainability and ESG programs

- **Executive Committee** → Oversight of sustainability programs and set sustainability goals and strategy
  - Approve SEMS guidance documents and key procedures
  - Inclusion of sustainability within business strategy and management

- **Risk & Compliance Committee** → Oversight of ESG risks and compliance
  - Review SEMS audit reports and Management Review
  - Approve variances to SEMS compliance or processes if related to an ESG risk

- **Management Committee(s)** → Oversight of ESG management
  - Approve variances to SEMS compliance or processes for assets under management

- **Investor Services team (via Director, Sustainability & Communications)** → Oversight and implementation of ESG management
  - Administer the SEMS and RI Policy and associated activities
  - Provide guidance to Board, committees, and staff on ESG issues
  - Monitor ESG performance and report on ESG performance to senior management and stakeholders at least annually
  - Internal sign-off on investments from ESG perspective
  - Recommend variances to SEMS compliance to committees as needed
  - Issue SEMS documents for approval to committees

- **Portfolio managers, E&S manager, sustainability analyst, and investment analysts** → Implement ESG management
  - Comply with SEMS and Declaration Documents
  - ESG assessments in due diligence and asset management
  - ESG implementation support to third parties
  - Delegate to third parties with control over ESG related activities
  - Manage investment team staff responsible for ESG impacts and management

The Risk and Compliance team and the Company Secretary team contribute to ESG implementation through risk management and governance support, both at the New Forests’ corporate and fund levels, as well as supporting portfolio companies and investments to implement best practices in risk management and good corporate governance.
Indicate the number of dedicated responsible investment staff your organisation has.

3

Additional information. [Optional]

New Forests is committed to conducting business in a responsible and ethical manner.

Code of Conduct

Our Code of Conduct is at the core of realising this commitment; employees are trained on the Code as well as the broader range of New Forests’ policies and procedures through a structured online training program and ad hoc internal trainings. We are proud to work in an organisation that promotes professionalism, courtesy, excellence, diversity, and respect.

Governance and Legal, Risk, and Compliance Frameworks

Our governance and compliance framework is driven by good practice and regulatory compliance, including the company’s Australian Financial Services Licence and responsibilities as a Registered Investment Advisor in the United States. Alongside financial compliance, New Forests’ systems and procedures encompass funds management governance, administration, and operational control systems.

New Forests’ Governance Objectives

- Promote ethical and responsible decision making
- Recognize and manage risks
- Maintain fiscal responsibility
- Enable solid foundation for management and oversight
- Make timely and balanced disclosures.

For more information, see New Forests’ 2019 Sustainability Report.

Indicate the roles in the organisation that have oversight, accountability and/or management responsibilities for climate-related issues.

☑ Oversight/accountability for climate-related issues
☑ Assessment and management of climate-related issues
☐ No responsibility for climate-related issues

Other role, specify (2)
Company Secretary
☐ Oversight/accountability for climate-related issues
☑ Assessment and management of climate-related issues
☐ No responsibility for climate-related issues

SG 07.6 CC  For board-level roles that have climate-related issue oversight/accountability or implementation responsibilities, indicate how these responsibilities are executed.

New Forests’ Board supported the company to undertake its Climate Risk & Strategy Work Plan, which includes alignment with the TCFD Recommendations. The Board reviews and approves the Climate Disclosure Report and will have oversight for New Forests’ Climate Neutrality Commitment, which comes into force in 2020.

Board members have oversight of sustainability initiatives and approve changes to guiding documents such as the Social & Environmental Management System (SEMS), the Sustainable Landscape Indicators (SIL), and the Responsible Investment Policy. All of these systems have climate-related guidance, primarily through the identification and management of physical and transition risks.

SG 07.7 CC  For management-level roles that assess and manage climate-related issues, provide further information on the structure and processes involved.

Jointly, the Executive Committee has oversight for integration of climate-related issues throughout the business, including in funds management as part of fiduciary duty.

The Managing Directors of each New Forests region (Australia-New Zealand, Southeast Asia, and the United States) is responsible for ensuring compliance with New Forests’ policies and fiduciary duty as an investment manager for their given geography. This includes managing climate-related risks and opportunities.

Operations Directors are responsible for ensuring climate-risk management and opportunities are considered and managed for all assets for which they are responsible. Operations Directors work with their internal teams, third-party managers, and investees to ensure compliance with New Forests’ ESG and RI policies, including for climate issues.

Investment Directors and Associate Directors have responsibility for integrating climate-related risk assessment in investment appraisals and incorporating appropriate climate-related risks and opportunities into investment documentation, including IC papers and recommendations.

The Head of Risk and Compliance has oversight for all climate-related risk management and is a co-lead of the Climate Risk & Strategy Work Plan for New Forests.

The Investor Services team, guided by the Director of Sustainability & Communications, ensures inclusion of climate-related issues in all relevant investor communication and documentation. The Director of Sustainability & Communications is a co-lead on the Climate Risk & Strategy Work Plan and is responsible for the Climate Disclosure Report.

Indicate if your organisation promotes responsible investment, independently of collaborative initiatives.

SG 10.2 Indicate the actions your organisation has taken to promote responsible investment independently of collaborative initiatives. Provide a description of your role in contributing to the objectives of the selected action and the typical frequency of your participation/contribution.

- Provided or supported education or training programmes (this includes peer to peer RI support) Your education or training may be for clients, investment managers, actuaries, broker/dealers, investment consultants, legal advisers etc.)

**Description**
New Forests provides training on our SEMS and RI Policy for new third-party property managers, which includes training on RI and RI implementation in asset management. We are also regular contributors to external workshops to train NGOs, government, and the private sector about how RI works in the forest sector. New Forests also supports peer development via our working group and membership participation in GIIN, PRI, Ceres, and other groups.

**Frequency of contribution**
- Quarterly or more frequently
- Biannually
- Annually
- Less frequently than annually
- Ad hoc
- Other

- Provided financial support for academic or industry research on responsible investment

**Description**
New Forests' employees contribute to research efforts through publications, and through R&D on investments, support many research initiatives. New Forests' senior staff also provide mentoring through some universities and have given podcasts and speeches to academic outlets. Additionally, New Forests participates in informational interviews by researchers and provides peer review of reports on ecosystem services markets, sustainable forestry, and sustainable land use investment.

**Frequency of contribution**
- Quarterly or more frequently
- Biannually
- Annually
- Less frequently than annually
- Other

- Encouraged better transparency and disclosure of responsible investment practices across the investment industry

**Description**
New Forests has been developing its Sustainable Landscape Investment framework, which includes metrics and reporting requirements that have been disseminated to third-party property managers and portfolio companies. In addition, New Forests is supporting the GIIN in its IRIS+ development program, which is updating its IRIS impact metrics framework.

**Frequency of contribution**
- Quarterly or more frequently
- Biannually
- Annually
- Less frequently than annually
- Ad hoc
- Other

- Spoke publicly at events and conferences to promote responsible investment

**Description**
### SG 10.3 Describe any additional actions and initiatives that your organisation has taken part in during the reporting year to promote responsible investment [Optional]

Some examples of activities for promotion of responsible investment include:

- Development of a blended finance structure to blend catalytic philanthropic capital with institutional investment in high-impact forestry investment in Southeast Asia.
- Developing a performance benchmarking framework for Sustainable Landscape Investment tool.
- Convening events focusing on sustainable real assets issues including responsible investment as a central theme.
- Convening a multi-stakeholder group to accelerate investment in natural climate solutions.
- We include information about our PRI signatory status and how we pursue responsible investment and sustainable forest management during informational meetings with prospective clients, timber customers, investee companies, and government representatives (e.g. including one or more slides in a presentation pack).
- We published our PRI Public Responsible Investment Report and Assessment Report on our website, and we include reference to the PRI in our standard marketing materials and slide deck templates.
- Our staff participate on boards of non-profits and academic organisations that support sustainable investment, conservation, and responsible forestry. Often, we are involved in these organisations as a representative of the private sector and investment industry. These include Forest Trends, The Center for People and Forests, the Australian Forest Products Association, FSC Australia, and the Center for Business and the Environment at Yale.
SG 11.2 Select the methods you have used.

- Endorsed written submissions to governments, regulators or public policy-makers developed by others
- Drafted your own written submissions to governments, regulators or public policy-makers
- Participated in face-to-face meetings with government members or officials to discuss policy
- Other, specify

SG 11.3 Where you have made written submissions (individually or collaboratively) to governments and regulatory authorities, indicate if these are publicly available.

- Yes, publicly available
- No

SG 11.4 Provide a brief description of the main topics your organisation has engaged with public policy-makers or regulators on.

New Forests primarily engages with policymakers and regulators on issues pertaining to investment in forestry, land, and regulated markets for ecosystem services. We also engage on related issues such as overseas investment policy and the sustainable development agenda. During 2019, we continued to advocate for policy frameworks that enable long-term, patient capital investment in the forest sector and that promote innovation in the forest sector, including via investment in new markets development for low carbon products. New Forests' CEO David Brand is on the Forest Industry Advisory Council to the Australian Government.

SG 12 Mandatory Core Assessed PRI 4

SG 12.1 Indicate whether your organisation uses investment consultants.

- Yes, we use investment consultants
- No, we do not use investment consultants.

SG 13 Mandatory Descriptive PRI 1

SG 13.1 Indicate whether the organisation carries out scenario analysis and/or modelling, and if it does, provide a description of the scenario analysis (by asset class, sector, strategic asset allocation, etc.).

- Yes, in order to assess future ESG factors

Describe

New Forests addresses key sustainability risks and opportunities and accounts for macro drivers, e.g. climate change, population growth, and resource depletion. We focus on the forestry asset class in large part due to its ESG profile.

- Yes, in order to assess future climate-related risks and opportunities

Describe

New Forests integrates scenarios for carbon pricing where relevant to the investment return in asset and portfolio models, considers the evolving local, national, and international frameworks for climate policy, and actively promotes investments that align with meaningful climate action, supporting alignment with the Paris Agreement.

- No, our organisation does not currently carry out scenario analysis and/or modelling

SG 13.2 Indicate if your organisation considers ESG issues in strategic asset allocation and/or allocation of assets between sectors or geographic markets.

We do the following

- Allocation between asset classes
- Determining fixed income duration
- Allocation of assets between geographic markets
- Sector weightings
- Other, specify

- We do not consider ESG issues in strategic asset allocation

SG 13.3 Additional information. [OPTIONAL]

To date, New Forests’ scenario analysis is largely qualitative, and we acknowledge further analysis is required to assess ESG and climate scenarios for long-term asset management. In our ANZ funds, we have investment exclusions for native forests (motivated by ESG factors), and funds are dedicated to sustainable plantation forestry. We also set asset allocation targets based on the ESG considerations by country. For example, our Asian strategy considers how ESG factors may influence investments while still enabling ESG improvements. Some of the target countries offer more challenging investment conditions, generally speaking, due to ESG factors and the scale and quality of assets. In the US, New Forests developed a proprietary approach to origination that targets high-climate-impact timberland investment opportunities. This strategy seeks to provide investors exposure to higher risk-adjusted
returns while sequestering and storing more carbon in sustainably managed forests in the US. This is a direct climate solutions investment strategy that meets emerging investor demand for low-carbon investments.

New Forests plans to add quantitative scenario analysis and has initiated a program for integration of scenario analysis in its ANZ investment program as a testing ground for this approach.

SG 13 CC  |  Mandatory to Report, Voluntary to Disclose  |  Descriptive  |  General
--- | --- | --- | ---
SG 13.4 CC  |  Describe how your organisation is using scenario analysis to manage climate-related risks and opportunities, including how the analysis has been interpreted, its results, and any future plans.

- **Initial assessment**
- **Describe**
  All New Forest prospective investments have been screened for climate-related risks and opportunities. To date, the scenario analysis is largely qualitative, though the company is working to quantify its process via improved TCFD-alignment and carbon footprinting. Where available, New Forests uses third-party programs and data that present climate scenario information relevant to forestry assets. New Forests analyzes climate-related risks and opportunities as part of its prospective investment due diligence using a standardized climate risk assessment tool.
- **Incorporation into investment analysis**
  New Forests integrates sensitivity analysis, including factors that may be materially driven by climate issues, into its modeling and appraisal for prospective investments. New Forests also uses third-party programs and data, where available, to understand the potential impacts of climate-related issues on prospective investments.

- **Initial assessment**
- **Describe**
  New Forests analyses climate-related risks on short, medium, and long-term time scales to best understand the relevant factors. Part of this is due to the long timeframe of forestry investments. Additionally, the company has looked at risks beyond the investment time horizon due to the understood long-term nature of climate change and its associated impacts.

- **Initial assessment**
- **Describe**
  No

SG 13.5 CC  |  Indicate who uses this analysis.

- **Board members, trustees, C-level roles, Investment Committee**
- **Portfolio managers**
- **Dedicated responsible investment staff**
- **External managers**
- **Investment consultants/actuaries**
- **Other**

SG 13.6 CC  |  Indicate whether your organisation has evaluated the potential impact of climate-related risks, beyond the investment time horizon, on its investment strategy.

- **Yes**
- **Describe**
  New Forests analyses climate-related risks on short, medium, and long-term time scales to best understand the relevant factors. Part of this is due to the long timeframe of forestry investments. Additionally, the company has looked at risks beyond the investment time horizon due to the understood long-term nature of climate change and its associated impacts.

- **No**

SG 13.7 CC  |  Indicate whether a range of climate scenarios is used.

- **Analysis based on a 2°C or lower scenario**
- **Analysis based on an abrupt transition, consistent with the Inevitable Policy Response**
- **Analysis based on a 4°C or higher scenario**
- **No, a range is not used**

SG 13.8 CC  |  Indicate the climate scenarios your organisation uses.

### SG 14.1

Some investment risks and opportunities arise as a result of long term trends. Indicate which of the following are considered.

- Changing demographics
- Climate change
- Resource scarcity
- Technological developments
- Other, specify (1)

**Other description (1)**

- Environmental change, including increasing exposure to acute and chronic physical risks, e.g. forest fires, windstorms, pests, and disease
- Other, specify (2)
- None of the above

### SG 14.2

Indicate which of the following activities you have undertaken to respond to climate change risk and opportunity.

- Established a climate change sensitive or climate change integrated asset allocation strategy
- Targeted low carbon or climate resilient investments
- Specify the AUM invested in low carbon and climate resilient portfolios, funds, strategies or asset classes.
  - Total AUM
  - 5,698,762,725 AUD
  - 3792599687 USD

**Specify the framework or taxonomy used.**

All of New Forests’ investments align with the Forestry Activities listed in the Low Carbon Investment Registry Taxonomy, including sustainable forest management, plantation establishment, and carbon-sequestration related improved forest management and related processing of timber products. These investments are offered through dedicated sustainable forestry funds and separate accounts.

- Phase out your investments in your fossil fuel holdings
- Reduced portfolio exposure to emissions intensive or fossil fuel holdings
- Used emissions data or analysis to inform investment decision making
- Sought climate change integration by companies
- Sought climate supportive policy from governments
- Other, specify

**Other description**

-Investing in GHG offset projects for regulated carbon markets
- None of the above

### SG 14.3

Indicate which of the following tools the organisation uses to manage climate-related risks and opportunities.

- Scenario analysis
- Disclosures on emissions risks to clients/trustees/management/beneficiaries
- Climate-related targets
- Encouraging internal and/or external portfolio managers to monitor emissions risks
- Emissions-risk monitoring and reporting are formalised into contracts when appointing managers
- Weighted average carbon intensity
New Forests’ vision is for forestry to become a leading sector in the transition to a sustainable future. The interconnectedness of the forest sector and climate change is central to this vision, with sustainable forestry and nature-based climate solutions (NCS) both essential in any climate mitigation pathway that can achieve the goals of the Paris Agreement. While this response focuses on climate, there is rising recognition of the need to understand the impact and risk of business on nature and biodiversity, as well as the risks and opportunities that businesses face relating to nature and biodiversity. Climate and biodiversity are both included in New Forests’ vision, which drives our business planning and strategy, making climate change, climate impact, and other environmental and social impacts central considerations in our business.

New Forests’ business strategy anticipates increasing risks from climate change, primary related to physical risks to forestry assets, but also believes there are positive opportunities for the forest sector in the global transition to a zero-carbon economy. Key trends affecting our business include climate regulation and demand for sustainable materials and sustainable investments. New Forests is positioned to benefit from positive feedback cycles linked to increased demand for low carbon investment, increased timber demand for low-carbon fibre and building materials, and product and investment innovation in NCS.

With an ongoing cycle of carbon sequestration and storage – both in the forest and in sustainable forest products – forestry investments align with a low-carbon economy, particularly with opportunities in the growing circular bioeconomy. Such investments may also benefit from carbon pricing if they can increase the amount of carbon stored in biomass over time. New Forests anticipates sustainable forestry investments will meet the emerging requirements for green finance and sustainable investment. For example, under the EU Sustainable Finance Taxonomy, forestry investments only qualify as sustainable if they include forest certification and GHG accounting. When considering the overall life cycle for timber and wood fibre products, it is also important to consider downstream emissions associated with transportation and timber processing. Innovation and operating efficiencies throughout the sector will continue to deliver emissions reductions throughout the supply chain while also contributing to the long-term storage of carbon in durable wood products.

New Forests’ investment strategies have the potential to bring capital to forestry-based climate change mitigation, adaptation, and resilience solutions. New Forests’ regional investment strategies promote climate action, such as:

- Our US Carbon Forestry strategy monetises carbon sequestration through the California emissions cap-and-trade market, combining carbon finance with timber harvest revenue, informed by proprietary analysis to target high carbon value properties.
- Our investment program in Southeast Asia includes a mandate to undertake additional climate mitigation activities, such as environmental restoration, reforestation, and avoided deforestation, as part of forestry investments that combine production and conservation.
- Our Australia and New Zealand investments participate in carbon markets via the New Zealand Emissions Trading Scheme and the Australian Carbon Climate Solutions Fund.

Please describe

Board and management role in oversight and assessing climate-related risks and opportunities

New Forests’ Board and Executive Committee recognise that forestry investment solutions are critical to address the climate crisis. Relevant climate change-related risks and opportunities are reviewed by the Board through the business planning and strategy review process. New Forests’ Executive Committee is responsible for implementation and monitoring of the business plan and strategy development on an ongoing basis.

Identifying and managing climate-related risks and opportunities

Climate change-related risks and opportunities are also integrated into the company’s enterprise risk management (ERM) framework, such that significant policy, market, and physical risks related to climate change are monitored and discussed. The ERM is guided by the risk appetite statement endorsed by the New Forests Board of Directors and includes regular review of risks at the New Forests corporate level, which is informed and supported by fund-level and asset-level risk assessment and management. Each risk is assigned a risk rating and tolerance, with stated mitigations and residual risk ratings determined. New Forests’ management of climate-related risks spans from financial risk mitigations such as insurance for tree crops, to ensuring local property management strategies include operational risk mitigation, through to stakeholder engagement in industry and policy forums, seeking to ensure forests are considered a vital part of the response to climate change.
New Forests is also active in investor groups on climate changes, including membership in CERES, IGCC, and AIGCC. Through engagement in the policy working groups of these investor organisations, New Forests aims to stay informed of policy changes and potential regulatory issues that may affect our investments. In addition, a member of New Forests’ US investment team leads US public policy engagement on climate and forest policy, and the company is part of a multi-stakeholder coalition that promotes the role of forestry in climate mitigation from a policy perspective. This active engagement is an important risk mitigant, and moreover aims to enhance New Forests’ ability to capture opportunities from supporting the transition to a low-carbon economy.

Processes for climate-related risks are not integrated into overall risk management

New Forests’ Social and Environmental Management System (SEMS) is designed to systematically identify, manage, and monitor E&S issues associated with our investment activities. The SEMS establishes a framework for each New Forests investment product to determine how it will comply with our RI Policy via a SEMS Declaration Document, which includes requirements for risk categorisation, due diligence, asset management, recordkeeping, and reporting. An annual internal audit is conducted for each fund, which supports management review, client reporting, and annual sustainability reporting.

The Certification and Standards Guidance of the SEMS sets a minimum standard for the use of third-party certification and standards across all of our funds. We seek to achieve forest management certification with the Forest Stewardship Council (FSC) for all eligible assets. The SEMS also includes standards guidance for the use of Environmental Management Systems, the IFC Performance Standards, and forest products chain of custody certifications. Thus, a main objective of the SEMS is achieving and maintaining the appropriate third-party certifications, which results in certified assets that can sell certified timber products.

**SG 18.2** Additional information [Optional]

New Forests also uses our Sustainable Landscape Investment (SLI) framework, which entails a system of indicators and targets across six thematic drivers of ESG and investment performance. The SLI metrics are being used to assess ESG impact for the assets and identify areas of success and future improvement.

In addition to the processes described above, New Forests employs operational management staff who oversee and support third-party property managers and operating companies, working closely across a variety of ESG issues above and beyond certification requirements. ESG reporting and monitoring is integrated throughout every step of our asset management to ensure it is a continual focus and to enable us to work together with portfolio companies and property managers to manage ESG risk and capture value from ESG opportunities.

**SG 18.1** Indicate whether any specific features of your approach to responsible investment are particularly innovative.

| Yes |

**SG 18.2** Describe any specific features of your approach to responsible investment that you believe are particularly innovative.

New Forests is committed to accelerating investment in sustainable forestry – a necessary component of meeting the aims of the Paris Agreement and the Sustainable Development Goals. As our business grows, we are innovating in financial models and structure, building new coalitions, and pushing the boundaries in forestry investment management. We do this in relentless pursuit of our mission: to see forestry as a sector leading the transition to a sustainable future. Recent highlights include:

- Commencing a Climate Risk & Strategy Work Plan that has advanced two key initiatives: (1) TCFD alignment not only for our investment management business, but now embedding TCFD-aligned requirements for our forestry assets. For our business, we have released a Climate Disclosure Report that covers Governance, Strategy, Risk, and Metrics and Targets for New Forests. For the investments we manage, we are working with external advisors to ensure we integrate strong data and science in the development of a consistent approach to assessing climate-related issues, climate scenario analysis, and disclosure, using consistent metrics while working toward appropriate targets. (2) Establishing a Climate Neutrality Plan with ambitious targets. New Forests will be climate neutral in its operations from 2020 onward and will seek to generate net carbon removals through the investments we manage. This means overall, as our business and investment portfolio grow, we are consistently aligning our growth with progress toward global carbon removal targets necessary to halt and reverse the impacts of climate change.
- New Forests partnered with Generation Investment Management to initiate a new vision for investing in Natural Climate Solutions. Through convening leading scientists, NGOs, and investors, we seek to create investor awareness of the opportunities for investing in NCS at scale. This work continues through 2020 as we work to release our shared investment vision and disseminate it throughout the investment industry, culminating with a high-level leadership summit on investing in NCS. This is a cross-asset-class initiative driven by investment managers and using a multi-stakeholder process to ensure investment strategies align with the science on NCS and that capital flows are unlocked toward this critical issue.
- Promoting blended finance as a tool to scale sustainable forestry investment in Southeast Asia – a sector in an area overlooked by most institutional investors. New Forests worked with a US-based foundation, the David & Lucile Packard Foundation, to design and launch an innovative structure that combines two equity share classes with similar rights and terms, but seeking to combine ability for high-impact-oriented investors to catalyse additional impact management within the fund, leading to the creation of increased climate, biodiversity, and community benefits. In addition to creating these additional positive impact outcomes, the high levels of ESG and impact management lower risk for commercial investors, supporting access to sustainable themed and impact investments at commercially appropriate scale, terms, and with an improved combined impact-risk return profile.
- Creating investment products that link climate mitigation at scale with core investment returns through our Carbon Forestry strategy. This approach demonstrates the concept of “impact alpha” – where the driver of the impact is directly correlated to the financial return drivers. Through this strategy, New Forests monetizes the climate mitigation benefit of “improved forest management” using regulatory protocols for carbon offset projects, creating revenue through credits sales in the California carbon market, which delivers current income while still enabling the long-term sustainable forest management for timber production, preserving the traditional timberland investment return drivers from capital appreciation and biological growth.
- New Forests has developed a conceptual model called Sustainable Landscape Investment that encapsulates six themes that we believe drive sustainability performance in forestry investment. We would be pleased to discuss this model with the PRI or others who are interested. In 2018 we launched an ESG and impact monitoring and reporting framework across the entirety of our portfolio. Through 2020 we anticipate continuing to implement this framework while deepening its linkages throughout the investment process and our asset management governance.

If there are any messages below, please review them before continuing. If there are no messages below, please save this page and continue.
CM1 01  Mandatory  Additional Assessed  General
CM1 01.1  Indicate whether the reported information you have provided for your PRI Transparency Report this year has undergone:

- Third party assurance over selected responses from this year’s PRI Transparency Report
- Third party assurance over data points from other sources that have subsequently been used in your PRI responses this year
- Third party assurance or audit of the correct implementation of RI processes (that have been reported to the PRI this year)
- Internal verification of responses before submission to the PRI (e.g. by the CEO or the board)

- Whole PRI Transparency Report has been internally verified
- Selected data has been internally verified
- Other, specify
  - Legal, Risk and Compliance team has reviewed the whole report
- None of the above

CM1 02  Mandatory  Descriptive  General
CM1 02.1  We undertook third party assurance on last year’s PRI Transparency Report

- Whole PRI Transparency Report was assured last year
- Selected data was assured in last year’s PRI Transparency Report
- We did not assure last year’s PRI Transparency report
- None of the above, we were in our preparation year and did not report last year.

CM1 03  Mandatory  Descriptive  General
CM1 03.1  We undertake confidence building measures that are unspecific to the data contained in our PRI Transparency Report:

- We adhere to an RI certification or labelling scheme
- We carry out independent/third party assurance over a whole public report (such as a sustainability report) extracts of which are included in this year’s PRI Transparency Report
- ESG audit of holdings

CM1 03.4  Describe the process of external/third party ESG audit of holdings, including which data has been assured.

All forestry assets are subject to third-party certification requirements, which include regular audits of key ESG issues in each asset. New Forests’ internal compliance processes also require quarterly and annual reviews of asset-level compliance with ESG requirements and fund-level review of significant ESG matters. These are assured through internal compliance requirements using compliance and risk registers.

CM1 04  Mandatory  Descriptive  General
CM1 04.1  Do you plan to conduct third party assurance of this year’s PRI Transparency report?

- Whole PRI Transparency Report will be assured
- Selected data will be assured
- We do not plan to assure this year’s PRI Transparency report

CM1 06  Mandatory  Descriptive  General
CM1 06.1  Provide details of the third party assurance of RI related processes, and/or details of the internal audit conducted by internal auditors of RI related processes (that have been reported to the PRI this year)

- What RI processes have been assured
  - Data related to RI activities
  - RI policies
  - Specify
    - Internal compliance reporting and SEMS
    - RI related governance
    - Other

- When was the process assurance completed (dd/mm/yy)
  - multiple

- Assurance standard used
  - IIA’s International Standards for the Professional Practice of Internal Auditing
  - ISAE 3402
New Forests' compliance system requires regular attestations and reviews of compliance against the company's SEMS and RI requirements at the asset and fund levels.

### CM1 07.1

**Indicate who has reviewed/verified internally the whole - or selected data of the - PRI Transparency Report. and if this applies to selected data please specify what data was reviewed.**
